

# Sherwood Forest Coleoptera

## Historical site species list and records from the late 1800's and early 1900's

*As recorded by J.W. Carr in "The Invertebrate Fauna of Nottinghamshire" 1918*

**T. and D. Pendleton 2008**

The following Coleoptera list is comprised of all species and records relating to Sherwood Forest NNR and featured in Carr's book "The Invertebrate Fauna of Nottinghamshire" published in 1918. The list is comprised of a total of 824 species, but there were an additional 36 species, for which no current nomenclature references could be found. These are listed with their original nomenclature, as featured in Carr's book and after the main historical list.

Dealing with Coleoptera nomenclature can be difficult. With many changes occurring since Carr originally wrote his book. Numerous species were found to have been renamed or reassigned to different subfamilies, which made the job of sorting through the species in Carr's book extremely time consuming. However, the resulting list is worth the effort and probably the first time it has been completed.

This historical Sherwood Forest list can serve many purposes, but primarily will enable much easier comparison between what species were present on site over 100 years ago, to those known to still be present over a century later.
