Sherwood Forest NNR Invertebrate Directory 2010/2011

Following the publications of separate species/records lists of five invertebrate groups recorded within the Sherwood Forest NNR, it was felt that there was a need to bring together all the available records into one or two working documents. Our original aim was the one complete document, but binding production meant that the directory would have to consist of two volumes. The A4 landscape format of previous lists, was abandoned in favour of an easier to use A4 portrait format. This has meant considerable work in changing the records layout produced in the original lists, but the new layout works much better.

The invertebrate groups listed in this directory include *Lepidoptera* (both butterflies and moths) and *Arachnida* in Volume 1 and *Diptera*, *Hemiptera* and *Coleoptera* in Volume 2. The obvious omission from this list is *Hymenoptera*, which will likely be included at a later date.

The records for each group are separated by blue dividing sheets, to help break up what in effect would otherwise look like a continuous list of latin names and records, helping those unfamiliar with the latin names of all invertebrate groups featured. The Appendices at the end of Vol 2 of the directory, provide lists of all Red Data Book species recorded within the Sherwood NNR, a list of species recorded new to the NNR in 2010 and sources of reference.

Invertebrate recording at Sherwood Forest NNR

Historically, the recording of Lepidoptera at Sherwood Forest began well over a century ago with Victorian entomologists, who typically showed a more diverse interest in natural history than is perhaps as evident today. Their notes, observations and often meticulous recording methods and study, provide the basis for the all the species lists that follow in Volumes 1 and 2.

R.E. Brameld and Sterland seem to have been the most active recorders of Sherwood's Lepidoptera a century ago, with possibly some competition between the two, leading to some dubious records on Sterland's side.

Not surprisingly, the years marking the two world wars, produced very few records from any of the invertebrate groups. Regular recording was never really taken up again until some work by Harrison in the 1960's, then by Lawrence Bee and several others at the Visitor Centre in the 1980's. Bee was aided by M.J. Sterling and J.D. Parrack, during his time at Sherwood, with I. Tillotson operating there in 1986.

A Rothamsted trap was also in continuous operation between 1986 and 1990, the cessation of which resulted in little coverage for another ten years. Sheila Wright, John Osbourne and a regular team of others, provided some coverage and many useful records from the Buck Gates and Clipstone Old Quarter areas in the early part of this century.

The present work of D. Hursthouse and his team on Budby South Forest, coupled with the work of T.A. and D.T. Pendleton at the Sherwood Forest Country Park, means that the NNR is probably receiving it's most constant coverage in over a century or more. This coverage extends to Sherwood's largely neglected micro lepidoptera, which has seen little interest since R.E. Brameld's time. Virtually all of the micro records sourced from Carr's book are attributable to him.

Arachnids have rarely been studied and recorded in the same way as other orders such as Coleoptera and Lepidoptera have at Sherwood Forest. Most of the historical records sourced from Carr's "*The Invertebrate Fauna of Nottinghamshire*" are attributed to G.W. Chaster and dated 1904, but the considerable lack of recording is evident when no further records appeared before surveys by J. Crocker in 1977 and 1978.

The most recent work was by M.L. Denton, E.J. Green, D.G. Hemingway, G. Legg, D.R. Nellist, and Sharp, D. who surveyed the Country Park and Buck Gates areas of the Birklands and Bilhaugh SSSI in 2002. The Country Park area, was also surveyed by H. Williams, T. Faulds and T. Harris, from the British Arachnological Society between 2003 and 2007. Sherwood Heath SSSI was surveyed by a. Godfrey in 2003, 2004 and 2006.

Despite being one of the largest insect orders, the overall difficulty in Diptera identification has meant that little recording of the many species to be found at Sherwood, has been undertaken during the past 130 years. Much of the NNR's current species list, is based upon the records of L.A. Carr in 1912 and 1914. Carr must

have been prolific in his work on Diptera, with most of his records being cited in J.W. Carr's book "*The Invertebrate Fauna of Nottinghamshire*" as "Sherwood Forest near Ollerton". We presume that this area is anywhere east of the B6034 minor road, that runs from Edwinstowe towards Budby South Forest and west of the traffic island on the A614 at Ollerton. Possibly, Carr covered much of what is now Sherwood Heath, but this remains unknown at the time of writing.

Carr was joined in his efforts by two other recorders, who seem to have remained confined to the Country Park area. R.C. Bradley and C.J. Wainwright provided many records referred by J.W. Carr as "Sherwood Forest near Edwinstowe" (Birklands and Bilhaugh in this list) Several species these men captured, were notable as being the first records for the UK at the time.

After the recording of Carr, Bradley and Wainwright in the late 1800's and early 1900's, virtually no Diptera recording was undertaken (at least from the information we have at our present disposal) and it was not until A. Godfrey's surveys at Sherwood Heath in 2003, 2004 and 2006, that any other records came from the NNR. Godfrey's Sherwood Heath surveys produced many new species recorded at Sherwood for the first time, or produced the first species records since the days of Carr, Bradley and Wainwright. Similarly, his most recent survey work in the Country Park and Buck Gates areas of the NNR, on behalf of Natural England East Midlands, yielded even more new Diptera and the reappearances of species not recorded for nearly a century.

Godfrey's work and that of the Victorian recorders, constitutes the backbone of the NNR Diptera species list, yet with a species count of just 587 species at the end of 2010, it is likely that we have only just sampled Sherwood Forest's Diptera diversity.

There must certainly be some surprising species yet to be encountered here, following the chance discovery of the Cranefly *Ctenophora ornata* in 2009. This is a species confined to the New Forest and Windsor Great Park and yet another example of how Sherwood is slowly developing a reputation to hold it's own, in a direct comparison to those nationally renowned sites.

Hemiptera is another under-recorded group and most of the historical site records are attributable to just a handful of individuals, namely L.A. Carr, J.W. Carr, Thornley and W.E. Ryles.

Hemiptera records from Sherwood Heath by A. Godfrey between 2003 and 2006 have contributed substantially towards the production of the species list, from this less frequently recorded Sherwood Forest site and provided several new species for the NNR. Similarly, R. Merritt's records for *Nepidae*, *Corixidae*, *Naucoridae*, *Notonectidae*, *Veliidae* and *Gerridae* are just about the only records listed for these families.

Today, there seem to be even fewer individuals making real efforts to record Sherwood's Hemiptera, with most recent records coming either through casual field observations or invertebrate site surveys primarily geared towards Coleoptera or Lepidoptera.

J.W. Carr's book produces many historical records from Coleopterists active during the late 1800's and early 1900's, such as J. Kidson Taylor, W.G. Blatch, E.C. Bedwell, G.W. Chaster, Canon Fowler and several others. Carr's work in bringing all of Nottinghamshire's invertebrate records, together into one publication, showed tremendous foresight on his part, as it produced an historical invertebrate site record, which provided a basis for us to work from when constructing the species lists.

A number of Coleoptera surveys have been conducted at Sherwood Forest and despite the fact that much coverage has been given over the last 40 years by numerous individuals, there still appear to be large gaps in the records of many species from around 1920-1960. This means that Coleoptera has perhaps not been as well recorded at Sherwood Forest, as one might have expected with such a notable site.

During the 1960's and into the 1970's, many records came from C. Johnson, P. Skidmore and F.A. Hunter. Over the last 20 years, more records have come from S. Wright, A. and C. Dutton and A. and A. Binding. D.A. Lott contributed heavily in 1998 when he surveyed much of the Sherwood Forest area, which was subsequently followed by a further survey in 2000 by A.B. Drane.

Post 2000 invertebrate surveys of Sherwood Heath by A. Godfrey, contributed substantially to this less frequently recorded Sherwood Forest NNR site and provided several new species for the NNR in return.

More recently, areas of Sherwood Forest were again surveyed by M.L. Denton, E.J. Green, D.G. Hemingway, R.J. Marsh and D. Sharp in 2001/2002, by T.A. and D.T. Pendleton in 2008, with the most recent work by K.N.A. Alexander in 2009 and 2010.

Multiple observer/recorder records

In order to save space in the records section, records of single species when trapped by multiple observers on a single night, or on several nights, are credited to the recorder(s) *etal* (the recorder being those who either supplied the record directly to us, or gave their permission for use in the list when sourced from other publications) Examples of multiple recorder records found in the following Sherwood Forest NNR lists are given below, but are largely restricted to lepidoptera records only.
