Sherwood Forest NNR Invertebrate Directory 1800's - 2012

Welcome to the second edition of the Sherwood Forest Invertebrate Directory, which again aims at collating all of the area's invertebrate records into a single document. This is probably a quite unique publication for any arge area of its type within the UK, so Nottinghamshire naturalists and local conservation bodies, are perhaps quite fortunate, to have such a collection of historical and modern records at their disposal. Documents such as this take much time to maintain and produce and are totally reliant on the continued support of individual recorders and organisations.

Well over a thousand records from 2011 were submitted for inclusion, with lepidoptera and coleoptera both being very well represented, thanks to the continued efforts of Dave Hursthouse and his team regularly covering Budby South Forest and ourselves at Clipstone Old Quarter and Sherwood Forest Country Park. Some old records have been kindly passed on to us by Derek Whiteley of the Sorby Natural History Group, with some extremely welcome records of Diptera and other less recorded orders. Hymenoptera represented the only large order, not to have been listed in the previous edition of the Directory, so features for the first time. Also new is the inclusion of an index, that presently lists around 4, 000 species recorded from the area.

Once again there was a significant number of new additions to the Sherwood invertebrate species list during 2011. A total of 21 species of moths were added, most of which were micros, whilst there were first area records of Freyer's Pug from Budby South Forest (DH et al) and Hummingbird Hawk-moth by ourselves at the Sherwood Forest CP.

Other orders fared similarly and with probably slightly less effort than has been put in over the previous few years. New coleoptera included the small Carabid, *Acupalpus parvulus*, from under a log at the dried out pond on Budby South Forest, *Cantharis nigra*, *Cryptocephalus fulvus* and *Platyrhinus resinosus*. A single Figwort plant growing at Clipstone Old Quarter, provided three species of *Cionus* weevils, two of which were completely new to the Sherwood Forest area. Several rare species had a very good year, with more adult *Cryptocephalus coryli* recorded in 2011, than all previous records totalled together since the early 1900's and small numbers of *Cryptocephalus querceti* were found restricted to a few ancient Oaks at Clipstone Old Quarter.

Much work remains to be done and invertebrate orders that continue to receive far less attention than either Lepidoptera or Coleoptera, provided a range of new species based largely on casual observations. The area Diptera list rose by seven new species, Hemiptera by six and Hymenoptera by seven. The only new Arachnid was the invasive Harvestman *Opilio canestrinii*, found on a wall at the visitor centre.

The Birklands and Bilhaugh, Birklands West and Ollerton Corner SSSI's and the Sherwood Forest NNR

It would have been simpler if the Sherwood Forest NNR encompassed all the sites mentioned in the various species lists. But due to a legal loophole at the time of notification, Natural England had to notify the ancient Sherwood Forest area as two separate Sites of Special Scientific Interest (SSSI) which they continue to regard as representing the whole of the Birklands and Bilhaugh (Sherwood Forest) complex. The two SSSI's are known as Birklands and Bilhaugh (of which the NNR forms part) and Birklands West and Ollerton Corner.

Birklands and Bilhaugh SSSI

The Birklands and Bilhaugh SSSI is made up of the Sherwood Forest Country Park, Budby South Forest, Proteus Square and Buck Gates. To save space in the records section, we have had to abbreviate the record location to Birklands and Bilhaugh, followed by the known site, e.g. Birklands and Bilhaugh / Budby SF or Birklands and Bilhaugh / Buck Gates.

Birklands West and Ollerton Corner SSSI

The Birklands West and Ollerton Corner SSSI incorporates Sherwood Heath and Clipstone Old Quarter, which are quoted as Birklands West / Sherwood Heath or Birklands West / Clipstone Old Qtr in the species lists.

Birklands West and Ollerton Corner records

Occasionally, there are records that are only quoted as Birklands West and Ollerton Corner. These records are from small areas away from Sherwood Heath and Clipstone Old Quarter and are largely attributable to areas situated to the west of the Country Park. At the current time, it is thought impractical to abbreviate all of the known sites within the SSSI's and this also serves to avoid the records becoming over complicated to the reader.

A brief history of Invertebrate recording at Sherwood Forest

Historically, invertebrate recording at Sherwood Forest began well over a century ago with Victorian entomologists, who often typically showed a more diverse interest in natural history than is perhaps evident today. Their notes, observations and often meticulous recording methods and study, provided the basis for all the species lists in Volumes 1 and 2. However, the Victorian entomologists were frequently vague about the precise location of their records, so records listed in Carr's book "*The Invertebrate Fauna of Nottinghamshire*" as being from "Sherwood Forest near Edwinstowe" are presumed to have been recorded from the area now forming the Country Park (part of Birklands and Bilhaugh)

Similarly, records listed as "Sherwood Forest near Ollerton" are likely to have originated from part of what is now the Birklands West and Ollerton Corner SSSI and anywhere east of the B6034 minor road, that runs from Edwinstowe towards Budby South Forest and west of the traffic island on the A614 at Ollerton. Possibly, Carr covered much of what is now Sherwood Heath or Proteus Square, but this remains unknown at the time of writing.

Lepidoptera

R.E. Brameld and Sterland seem to have been the most active recorders of Sherwood's Lepidoptera a century ago, with possibly some competition between the two, leading to some dubious records on Sterland's side that Carr was reluctant to list in his book. Not surprisingly, the years marking the two world wars, produced very few records from any of the invertebrate groups and regular recording was never really taken up again until some work by Harrison in the 1960's, then by Lawrence Bee and several others at the Visitor Centre in the 1980's. Bee was aided by M.J. Sterling and J.D. Parrack, during his time at Sherwood, with I. Tillotson operating there in 1986.

A Rothamsted trap was also in continuous operation between 1986 and 1990, the cessation of which resulted in little coverage for another ten years. Sheila Wright, John Osbourne and a regular team of others, provided some coverage and many useful records from the Buck Gates and Clipstone Old Quarter areas in the early part of this century.

The present work of Dave Hursthouse and his team on Budby South Forest, coupled with the work of ourselves at Sherwood Forest Country Park and Clipstone Old Quarter, means that the area is probably receiving its most consistent coverage in over a century or more. This coverage extends to Sherwood's largely neglected micro lepidoptera, which has seen little interest since Brameld's time. Virtually all of the micro records sourced from Carr's book are attributable to him.

Arachnida

Arachnids have rarely been studied and recorded in the same way as other orders such as Coleoptera and Lepidoptera have at Sherwood Forest. Most of the historical records sourced from Carr's book are attributed to G.W. Chaster and dated 1904, but the considerable lack of recording is evident when no further records appeared before surveys by J. Crocker in 1977 and 1978.

The most recent work was by M.L. Denton, E.J. Green, D.G. Hemingway, G. Legg, D.R. Nellist, and Sharp, D. who surveyed the Country Park and Buck Gates areas of the Birklands and Bilhaugh SSSI in 2002. The Country Park area, was also surveyed by H. Williams, T. Faulds and T. Harris, from the British Arachnological Society between 2003 and 2007. Sherwood Heath SSSI was surveyed by a. Godfrey in 2003, 2004 and 2006.

Diptera

Despite being one of the largest insect orders, the overall difficulty in Diptera identification has meant that little recording of the many species to be found at Sherwood, has been undertaken during the past 130 years. Much of the NNR's current species list, is based upon the records of L.A. Carr in 1912 and 1914. Carr must have been prolific in his work on Diptera, with most of his records being cited in Carr's book as "Sherwood Forest near Ollerton". We presume that this area is

Carr was joined in his efforts by two other recorders, who seem to have remained confined to the Country Park area. R.C. Bradley and C.J. Wainwright provided many records referred by J.W. Carr as "Sherwood Forest near Edwinstowe" (Birklands and Bilhaugh in this list) Several species these men captured, were notable as being the first records for the UK at the time.

After the recording of Carr, Bradley and Wainwright in the late 1800's and early 1900's, little Diptera recording was undertaken although records from the Sorby Natural History Group have helped fill in some of the gaps and it was not until A. Godfrey's surveys at Sherwood Heath in 2003, 2004 and 2006, that any other records came from the NNR. Godfrey's surveys produced many new species recorded at Sherwood for the first time, or produced the first species records since the days of Carr, Bradley and Wainwright. Similarly, his most recent survey work in the Country Park and Buck Gates areas of the NNR, on behalf of Natural England East Midlands, yielded even more new Diptera and the reappearances of several species not recorded for nearly a century.

Godfrey's work and that of the Victorian recorders, constitutes the backbone of the NNR Diptera species list, yet with a species count of just 587 species at the end of 2010, it is likely that we have only just sampled Sherwood Forest's Diptera diversity.

There must certainly be some surprising species yet to be encountered here, following the chance discovery of the Crane fly *Ctenophora ornata* in 2009. This is a species confined to the New Forest and Windsor Great Park and yet another example of how Sherwood is slowly developing a reputation to hold its own, in a direct comparison to those nationally renowned sites.

Hemiptera

Hemiptera is another under-recorded group and most of the historical site records are attributable to just a handful of individuals, namely L.A. Carr, J.W. Carr, Thornley and W.E. Ryles.

Hemiptera records from Sherwood Heath by A. Godfrey between 2003 and 2006 have contributed substantially towards the production of the species list, from this less frequently recorded Sherwood Forest site and provided several new species for the NNR. Similarly R. Merritt's records for *Nepidae*, *Corixidae*, *Naucoridae*, *Notonectidae*, *Veliidae* and *Gerridae* are just about the only records listed for these families.

Today, there seem to be even fewer individuals making real efforts to record Sherwood's Hemiptera, with most recent records coming either through casual field observations or invertebrate site surveys primarily geared towards Coleoptera or Lepidoptera.

Coleoptera

J.W. Carr's book produces many historical records from Coleopterists active during the late 1800's and early 1900's, such as J. Kidson Taylor, W.G. Blatch, E.C. Bedwell, G.W. Chaster, Canon Fowler and several others. Carr's work in bringing all of Nottinghamshire's invertebrate records, together into one publication, showed tremendous foresight on his part, as it produced an historical invertebrate site record, which provided a basis for us to work from when constructing the species lists. A number of Coleoptera surveys have been conducted at Sherwood Forest and despite the fact that much coverage has been given over the last 40 years by numerous individuals, there still appear to be large gaps in the records of many species from around 1920-1960.

This means that Coleoptera has perhaps not been as well recorded at Sherwood Forest, as one might have expected with such a notable site.

During the 1960's and into the 1970's, many records came from C. Johnson, P. Skidmore and F.A. Hunter. Over the last 20 years, more records have come from S. Wright, A. and C. Dutton and A. and A. Binding. D.A. Lott contributed heavily in 1998 when he surveyed much of the Sherwood Forest area, which was subsequently followed by a further survey in 2000 by A.B. Drane.

Post 2000 invertebrate surveys of Sherwood Heath by A. Godfrey, contributed substantially to this less frequently recorded Sherwood Forest NNR site and provided several new species for the NNR in return. More recently, areas of Sherwood Forest were again surveyed by M.L. Denton, E.J. Green, D.G. Hemingway, R.J. Marsh and D. Sharp in 2001/2002, by T.A. and D.T. Pendleton in 2008, with the most recent work by K.N.A. Alexander in 2009 and 2010.

Hymenoptera

Historically, Hymenoptera have been the least recorded of all the major invert orders at Sherwood Forest, with seemingly few entomologists willing to take up the challenge. Potentially, there remains much recording work still to be done, in order to achieve a more balanced view of the species diversity found within the NNR and at nearby sites.

The list of records we have compiled only includes Ants, Bees and Wasps (suborder:Apocrita; group:Aculeata). Records of Parasitic wasps, Ichneumons and Chalcids etc (suborder:Apocrita; group:Parasitica) were hardly recorded even at the turn of the last century and there seems to have been no further work done on these, or Sawflies and Woodwasps (suborder:Symphita) to the present day.

They generally represent a difficult order to study, with few species readily identifiable in the field or via good quality photographs, so it is not totally surprising that so few historical and modern records were available for inclusion in this publication. Much of the recent work appears to have been done by M. Archer and we are grateful to Derek Whiteley of the Sorby Natural History Society, for supplying us with the Sorby group's invertebrate records from the NNR and nearby sites. Archer's records in the spreadsheet data from Sorby, are all listed rather vaguely as "survey 1985-1992 includes Budby SF". This could mean that he recorded the same species during each year surveyed, but this is doubtful. A look at the Invertebrate Site Register spreadsheet, given to us by Natural England, list the same species, but assign the date for most records to 1985 only. We have adopted the same policy here, until we can trace the individual species records.

Archer's survey is without doubt, the most comprehensive Hymenoptera survey undertaken in the NNR to date that we know of. Most other records have either come as casual records during site surveys for other invert orders, or by the efforts of a handful of individuals. Andy Godfrey's surveys of Sherwood Heath NNR between 2003 and 2006, contributed several interesting and useful records, as did Derek Whiteley at the same site over a number of years from the late 1980's onwards.

Of the Hymenoptera records listed in Carr's book, there are few that are directly attributed to Sherwood Forest, although many species Carr quoted as being "common" or "widespread throughout the county", no doubt did occur at Sherwood Forest at the turn of the last century.

Multiple observer/recorder records

In order to save space in the records section, records of single species when trapped by multiple observers on a single night, or on several nights, are credited to the recorder(s) *et al* (the recorder being those who either supplied the record directly to us, or gave their permission for use in the list when sourced from other publications) Examples of multiple recorder records found in the following Sherwood Forest NNR lists are given below, but are largely restricted to lepidoptera records only.
